

UV FLY TRAPS

FLY CONTROL®

UV-lamp fly trap

SPECIFICATION

Fly Control UV-lamp fly traps are ideal to use in gastronomic shops, bars, restaurants, supermarkets, groceries in order to catch all flying insects, silently, effectively, cleanly and ecologically.

The UV lamp trap catches all flying insects (flies, mosquitoes, midges, moths...).

Fly Control traps are available in 4 different models, produced in different material, in various sizes and with lamps of several powers, in order to protect in the best way all kinds of environments.

Insects are attracted by 2 or 4 fluorescent UV lamps, then captured by a special glue board which is placed into the trap. In order to increase attractiveness, the glue contains natural attractants and pheromones.

The glue is UV-resistant, thus being efficient for a long time. Fly Control should be placed on a piece of furniture, hanged on the wall or on the ceiling. Fly Control complies HACCP food regulation.
