

INSECTS TRAPS

FRUIT FLY TRAP®

Trap for *Drosophila* spp.

CHARACTERISTICS

Fruit fly trap is an ecological trap for *Drosophila* (fruit midge). It is built entirely in resistant plastic which protects the trap from impacts and atmospheric agents.

Fruit fly trap has two entrances that allow insects to enter, more over it has also a screw top.

MODE OF USE

The trap is active when food attractive (cod. 821) are introduced.

In this way the trap is able to attract insects. Once they enter in the container, they can not go out.

Fruit fly trap hangs using the specific strap supplied with the trap.

This snare is useful in areas where it is necessary to control and to monitor the presence of *Drosophila*. It can be used in indoor environments subject to infestations such as: bars, restaurants, breweries, cellars, fruit storage locals, pastry workshops...in a complete ecological way without insecticides.

Fruit fly trap can be use more than one time after a cleaning process.
