## GLYCOL

SOLVENT FOR DILUTION OF INSECTICIDES  
OR DISINFECTANTS

Propylene glycol is a low toxicity, colorless and odorless liquid solubilizer, used to dilute concentrated liquid formulations with insecticidal and disinfectant action.

Glycol allows to obtain optimal solutions to be used both indoors and outdoors through the use of thermal-fogger generators such as the **Mini Fog** (code 711).

Propylene glycol allows to obtain a fog able to completely and homogeneously saturate treated areas.

The obtained mix has an high penetration power in the green areas, without greasing or staining, making glycol a perfect carrier in these scenarios.

The obtained solutions facilitate homogeneous spread of the active ingredients present in the concentrated formulations, maintaining their stability and suspension, without altering its physical-chemical characteristics.

### FIELD OF APPLICATION

Propylene glycol is compatible with formulations:

- emulsified concentrates (EC),
- watery microemulsions (ME),
- low environmental impact formulations (BIA);

For a correct use read the instructions on the label.

#### Technical Data

Packaging 5 L tank

Code 751-05
