

# BAIT STATIONS

## MASTERBOX PLUS®

### Multifunctional Rat bait station

#### CHARACTERISTICS

Masterbox Plus is a rat bait station which suits all the rat and pest control needs. It can be used with wax blocks, grains, fresh and liquid baits and at the same time it could work as crawling insects monitoring station. In fact under the manger the operator could easily position any glueboard now available on the market.

Due to its safety lock and to its tamper-proof fixing it allows you to create extremely secure and durable monitoring station.

Here follow some of the main features that make Masterbox Plus a multi-purpose and high quality choice for the professional pest controller:

- manufactured in shockproof polypropylene resistant to weather and UV light;
- closure with security key;
- stainless steel rod to fix the rat bait horizontally;
- plastic rods to fix the bait vertically;
- suitable to be used with liquid rodenticide;
- extractable tray for an easy cleaning and maintenance;
- suitable for the simultaneous monitoring of crawling insects while at the same time using rodenticide or a virtual bait;
- space of 2 cm under the manger to place a glueboard for cockroaches;
- suitable to contain the most widespread snap traps;
- new fixing system which allows a rapid release for a fast maintenance of the bait station.

Masterbox Plus can be equipped with a transparent cover which allows an easy and quick monitoring.

This trap can be used for rodent/insect control programs in compliance to the HACCP food manufacturing regulation, both indoors (in case of handling and/or production of foods solely with the use of adhesives) and outdoors.

Masterbox Plus complies with the Ministerial Ordinance of 10 February 2012 (mandatory use of rat poison dispensers equipped with security key).

Diameter entry hole: 52 mm
