

## EQUIPMENTS

## MINI FOG®

## Gas Thermal Fogger

## FEATURES

Gas Thermal Fogger. It can be used for thermal fog treatments in small spaces as, warehouses, containers, waste bins, drains, sewage systems, etc.

The fog produced by the thermal fogger quickly reaches even the most inaccessible areas. Since it does not have an internal combustion engine, it does not produce exhaust gas.

A butane gas can last about 1 hour. The can can be removed at the end of treatment and then re-used for further treatments until depletion.

The small size and low weight ( only 1.2 kg ) make the Gas Thermal Fogger handy and convenient.

The tank holds about 1.5 liters of liquid insecticide. It is advisable to use our ready to use "Toxolin Super" (Pyrethrum + Tetramethrin ) based on mineral oil, or a concentrate insecticide diluted in propylene glycol.

Mini Fog is CE certified.

Technical data	Pump	Butane can
Tank	1,8 L	390 ml
Weight	1,2 Kg	
Dimensions	45,6 x 16,6 x 36,8 cm	
Packaginga	1 pc	1 pc
