

INSECTICIDES

PYREMOX®

READY-TO-USE AEROSOL INSECTICIDE

Registration Ministry of Health N.20093

Composition: 100 gr of product contain

Pyrethrum extract 25%	0,4 %
Tetramethrin	0,45 %
Piperonyl Butoxide	3,0 %

PROPERTY:

insecticide specially formulated to obtain both an immediate knockdown effect that a discrete residual action.

Natural Pyrethrum, present in the formula in good concentration, acts by blocking the nervous system insects and avoiding possible addictions to the product.

Tetramethrin strengthens the action of the extract of Pyrethrum, increasing both its knock-out effect and its residual effect.

PYREMOX is active against all flying insects and in particular against mosquitoes and flies.

HOW TO USE:

Close doors and windows and spray the product upwards. For normal environments dimensions do not exceed 4 -5 seconds.

Leave for about 30 minutes and then aerate well the local treated before staying there again.

To get a prolonged action, spray also on shutters or shutters, on window sills and on the wires of light.

Note:

carefully follow the instructions and warnings indicated on the label. Information reserved for doctors, hygienists, veterinarians and parasitologists.
