

# UV FLY TRAPS

## EUROFLY®

### SPECIFICATION

Eurofly traps ensure the capture of flying insects (flies, mosquitoes, mites, tignets, etc. ), without polluting the surrounding environment with chemicals or harmful substances.

Eurofly is available in different versions and is suitable for silently and cleanly capturing all types of flying insects. Eurofly can be used in food industries, food shops, butchers, kitchens, restaurants, pastry shops, supermarkets, bars, etc.

Three different Eurofly models are available according to size and according to the power degree of the UV light neon used. These features make the Eurofly lamp able to protect conveniently any kind of room.

Insects attracted by the lamp are caught by a special adhesive cardboard panel placed in into the trap.

Adhesives are also UV light-resistant thus remaining effective for several months.

Eurofly can be placed on a piece of furniture, attached to the wall or hanging from the ceiling.

It is also available an IP65 Eurofly model, suitable for use in very humid environments or in case water is largely used for washing the environments (ideal for use in slaughterhouses, dairies, fishmonger).

IP65 Eurofly models are supplied with shatterproof UV-light neons. All Eurofly lamps comply with 852/04 EC on hygiene, and with HACCP regulation.
