

RODENTICIDES

HOCUS TOPUS

Disaccustoming dielectric anti gnawing aerosol for mice and rats.

CHARACTERISTICS:

Disabling anti gnawing for mice and rats, designed for the application on surfaces commonly attacked by rodents such as plastic and rubber components, cables and wiring in general.

Hocus topus, thanks to its particular formulation, creates a feeling of disgust in rodents, rapidly discouraging the gnawing behavior since the beginning.

TARGETS

Rattus rattus, *Rattus norvegicus*, *Mus musculus*

USAGE

Hocus topus is a dielectric aerosol to distribute uniformly at a distance of 15-20 cm on surfaces that need to be protected.

The dispenser MINIJET allows to intervene precisely on the components to be treated.

It is necessary to remove residues or dust if present before carrying out the treatment.

The duration of the treatment varies depending on environmental conditions, it is recommended to repeat the application after a maximum of 4 weeks.

NOTES

For a correct use of the product strictly follow the label.

Technical data

Packaging 500 ml can in 12 pcs. cartonbox

Code 754
