## NEW SPRAYMASTER ONE SHOT®

Ready-to-use Aerosol Insecticide

**TARGET:**  
crawling and flying insects

### PROPERTIES

New Spraymaster one-shot is an aerosol insecticide based on Pyrethrum Extract and Permethrin.

The product has an immediate knockdown effect and a good flushing out action against flying and crawling insects such as flies, mosquitoes, wasps, horseflies, hornets, ants, fleas, etc.

Composition	
Extract of Pyrethrum 25%	0,20 %
Permethrin at 92%	0,22 %
Piperonyl Butoxide	0,80 %

New sprymaster one-shot is equipped with a particular valve that, once activated, allows the total emptying of the can, effectively disinfecting the room in few minutes.

New Spraymaster one shot can be used for quick disinfestations in any type of living environment and in all sectors of industry. Furthermore, it can be used in kitchens, restaurants, hospitals, schools, offices, etc.).

### USAGE:

Place a can of New Spraymaster one-shot in the centre of the area that has to be treated, close all the doors, windows and possible sources of ventilation.

Activate the can and leave the room immediately.

The product contained inside the can will be dispensed automatically, suturing the environment.

Use one can of New Sprymaster on-shot for every 30 m<sup>2</sup> to treat.

Before entering the treated areas remember to open all the windows to allow the circulation of air. Don't stay inside the room during the treatment.

In case more than one can is used, it is advisable to activate the one furthest from the escape route first.

### WARNINGS

Does not contain harmful propellents. Carefully follow the instructions listed on the label.
