

# INSECTICIDES

## SOTTOZERO®

Frozing insecticides without active substance

**TARGET:**

- CRAWLING INSECTS
- WASPS

### CHARACTERISTICS

Highly efficient freezing aerosol insecticide with strong knock-down action. Sottozero is active against crawling and flying insects, in particular against cockroaches, ants, bedbugs, moths, mites, wasps etc.

Its action appears to be immediate and can be used in civil environments (hotels, schools, meeting places, cinemas, wineries, cohabitations, hospitals, vehicles) and domestic (kitchens, cellars, bedrooms, gardens etc).

The particular formulation of Sottozero guarantees maximum safety for adults, children and pets. The refrigerant gas present inside Sottozero acts on the insects causing a sudden thermal shock followed by a rapid death within a short time.

### MODE OF USE

Direct the jet onto the target keeping at a distance of about 15-20 cm, dispense the product continuously for 3-4 seconds. To perform treatment of wasp nests use the appropriate anti-protection clothing sting. Do not use the product in closed environments or in areas without ventilation.

### WARNINGS AND PRECAUTIONS FOR USE

Follow the instructions and warnings indicated on the label.

#### Tecnical data

target	crawling insects, wasps
Formulation	Spray ready to use
Confezione	12 pz of 500 ml

**Code 110**
