

INSECTS TRAPS

UNITRAP®

GLUE BOARD FOR STORED PRODUCT INSECTS

CHARACTERISTICS

Unitrap is a glue board for monitoring Lepidoptera like Pyraloidea Moths (*Ephestia kuehniella*, *Plodia interpunctella*) Ptinidae Beetles (*Lasioderma serricorne*, *Stegobium paniceum*).
The glue board has to be activated with the proper pheromone.

Lepidoptera are widely spread in the whole world and known for the damages they can cause to dried food like cereals, wheats, dried fruit, tobacco, both in production and stock sites, where raw materials and finished goods can be stocked.

MODE OF USE

Place the traps against walls or machines in warehouses, stock places and production spaces.
Put the traps at almost 2m high, leaving between 5 to 10 m among each trap.

NOTES:

For a correct use of the product, carefully read the instructions on the product.

Technical data	
Target	<i>Ephestia kuehniella</i> <i>Plodia interpunctella</i> <i>Lasioderma serricane</i> <i>Stegobium paniceum</i>
Packaging	pack of 10 in 200 pcs carton box
Code	150
