

Mimetic Mhouse

CARACTERISTIC

Mimetic Mhouse is an innovative galvanized multicatch trap for mice and rats, it is resistant to all environmental conditions, it is removable and washable. The particular mechanism of capture allows to capture rodents without developing them any mistrust. The fully mechanical operation and compact dimensions allow its use in places difficult to reach. The captured rodents are collected inside the trap, preventing any environmental contamination. They only need a food attractant and the absence of biocides allows its use even in particularly sensitive environments or where there are non-target animals and people.

Mimetic - Mhouse is available in two different sizes: **Medium** and **Large** to adapt the intervention according to the degree of infestation and the target species.

APPLICATION AREAS

This device can be used for rodent control programs according with HACCP also for indoor and outdoor areas in the civil, industrial and domestic.
