

PYREGREEN 5.0

Liquid and Concentrated insecticide with a knock down and residual for domestic and civil use.
Registration Ministry of Health N.20093

Composition	Pyrethrum Extract 50%	g 5,0
	Coformulati q.b. a	g 100,0

CHARACTERISTICS

PYREGREEN 5.0 is a concentrated liquid insecticide that is Natural Pyrethrum based, in formulation with solvents of biodegradable plant origin. It has fast high-killing action and it is suitable for non-residual treatments in industrial, civil and domestic environments.

Application Area: It can be used against flying insects (mosquitoes, flies, gnats, moths etc.) and crawling insects (cockroaches, lice, fleas, flour moths, grain weevil etc.) in domestic dwellings, basements, attics, garages, courtyards, restaurants, hotels, dining halls, cafés, bakeries, pasta factories, pastry shops, mills, empty siloes, slaughterhouses, cheese factories, dairies, cold cut-warehouses, empty food warehouses (they can contain food only if sealed and protected), public shops, hospitals, clinics, schools, barracks, offices, cinemas, theatres, libraries, public places, stockhouses, cigarette factories (only if empty), manufacturing of wool, wood, leather, paper, pallets, containers; means of transport (underground, cars, ambulances, planes, buses, ships, trains, plane and port areas), livestock, animal shelters, stalls, kennels, stables, boulevards, parks and gardens, suburban areas, campsites, tourist resorts.

DOSES AND INSTRUCTIONS

PYREGREEN 5.0 can be distributed with manual or electric nozzles, backpack sprayers, air-sprays, nebulizers or termonebulizers depending on needs and treated surfaces. This product can be effectively used for mosquitoes' control in public and private green areas such as hedges, gardens, tree-lined boulevards, bushes and grass surfaces. To treat green areas it is recommended to diffusely pour the vegetation avoiding droppings. **PYREGREEN 5.0** can be used after water dilution at 0,8% concentration (80ml in 10 litres of water), the achieved solution is indicated for a 100-150 mq surface.

- Against flying insects for internal use: distribute at specified dosage on surfaces such as walls, floors, bases.
- Against crawling insects for internal use: distribute at specified dosage on surfaces, cracks, baseboard, under furniture etc. External use: distribute at correct dosage on surfaces, external building walls, sidewalks, squares etc.
- To treat mosquitoes in green areas: dilute in water at 2% (200ml in 10 litres of water) and moisten through nebulizer or engine/electric spray nozzle. It is recommended to diffusely pour the vegetation avoiding droppings. **PYREGREEN 5.0** can also be mixed at 2% with petroleum-based, glycol-based or vegetal-based solvents (200ml in 10 litres of solvent) in order to be used with cold-fog or hot-fog devices (ULV) for nebulizations in penned environments, with 0,5 litres of solution for 1000 mq areas. The use with these modalities are reserved only for professional operators.

Follow the instructions and the warnings on the label. Information reserved for physicians, hygienists, veterinaries and parasitologists
