

UV-LED TORCH+GLASSES

CHARACTERISTICS

The UV-LED torch is a torch for inspections, with 51 UV LEDs. Due to its UV light beam, it is possible to highlight the organic traces present at the moment of the inspection. Used in synergy with a biomarker, which is present in the virtual bait, it allows for an easy identification of signs of presence and the rodents' walkways identification. Consequently, the examiner can identify the outbreak and the passage of the rodent and can also identify to find the hotbed and the passage of rodents. Thus, he can act in a better way. The compact design, robustness, and the high autonomy make the UV-LED Torch a useful tool at the disposal of the exterminator. Glasses for UV are also available.
